The present invention provides novel human G protein-coupled receptor (GPCR) proteins and their encoding nucleic acids. The invention is useful tor making a probe for dor-blot analysis and for RT-PCR identification of the expression of the receptor in tissue samples. The invention is also useful for identifying candidate compounds as inverse agonists, agonists to partial agonists and as research tools in determining the location of the receptors within the body. The present sequence is human orphan G protein-coupled receptor cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 TTAATGTCTTCATTTGCCTTTGCTATAATGGTAGGCAATGCTGTGGTCATCTTAGCCTTT 120

polynous and its included as an anti-AXOR35 antibody, an AXOR35 expression vector, producing a recombinant host cell by introducing the vector into a cell such that the host cell by introducing the vector into a cell such that the host cell by introducing the host cell expressing AXOR35, identifying/screening for agonists or antagonists of AXOR35 and inhibiting or promoting the function of lymphocytes, macrophages, cosinophils, or neutrophils in diseased tissue, by administering to the patient AXOR35 agonists or antagonist. The agonist or antagonist identified is useful for treating a disease such as asthma, or for inhibiting or promoting the function of lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue such as an asthmatic lung. AXOR35 or polynucleotide is useful in diagnostic assays, for identifying compounds that are agonists or antagonists of AXOR35, as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               476
                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to human endogenous orphan G protein-coupled receptor (GPCR) proteins and polynucleotides encoding such proteins. The CDNA sequence of the human G protein-coupled receptor (GPCR) is useful in making a probe for dot-blot analysis against tissuemRNA and/or for RT-PCR identification of the expression of the receptor in tissue samples. GPCR sequences of the invention may be used in disease/disorder identification and/or selection, in screening of candidate compounds for use as pharmaceutical agence and in research settings. The present sequence is human endogenous orphan GPCR CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

CDNA Library Preparation: DOE Joint Genome Institute:
http://www.jgi.doe.gov
DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
Naming Conventions: BST name is generated by the concatenation of
the JGI Clone Id and the direction of sequencing. The suffix '.fwd'
indicates a forward sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Plate: CARU 0081 row: n column: 18
High quality sequence stop: 706.

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering.information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
Plate: 309 row: C column: 10

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
